🧠 TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, Java, SQL, PHP, HTML5, CSS

Frameworks & Libraries: React.js, Node.js, Django, Laravel (Learning)

Databases: MySQL, PostgreSQL, SQLite

Tools & Technologies: Git, GitHub, REST APIs, CRUD Operations, API Integration

Core Concepts: Object-Oriented Programming (OOP), Data Structures, Responsive Web Design, Generative AI Integration

🎓 EDUCATION

LJ Institute of Engineering, B.Tech in Computer Engineering

2024 – 2028 | Ahmedabad

🏆 AWARDS

Odoo

Odoo Hackathon Finalist: Selected as one of the 247 finalists out of 2,200+ participants, demonstrating rapid prototyping, adaptability, and advanced problem-solving skills under strict time constraints.

Smart India Hackathon (SIH)

Smart India Hackathon (SIH): Competed in the college-level phase, collaborating with a team to conceptualize and develop technical solutions for complex, real-world problem statements.

📁 TECHNICAL PROJECTS

ByteFlow – AI Framework (Python)

- Developed a comprehensive AI framework focused on workflow automation and efficient task execution.
- Implemented memory management systems to optimize data handling and application performance.
- Successfully integrated offline Large Language Models (LLMs) to ensure reliable generative AI capabilities without continuous external API dependencies.

CareerXpert – AI Job Application System (HTML/Full Stack)

- Built a full-stack application designed to streamline the job application process using generative AI.
- Integrated secure user authentication and a scalable database architecture to manage user profiles and application data.
- Engineered an automated AI resume generation feature to tailor applications dynamically based on user inputs.

MoodBaseMusicSystem (Python)

- Developed a Python-based intelligent system designed to analyze data and curate targeted music recommendations.
- Leveraged algorithmic logic to map mood-based inputs to relevant outputs, demonstrating strong back-end scripting and data processing capabilities.

WebcamFighter – Computer Vision Application (React.js/ Node.js/JavaScript)

- Created an interactive, real-time computer vision application.
- Leveraged visual data processing to track user movements and translate them into actionable inputs for interactive, browser-based gameplay.

Additional Web Development Projects (React.js/Node.js/TypeScript/JavaScript)

VendorBridge & CarpoolingPlatform: Engineered dynamic web platforms utilizing JavaScript and TypeScript to manage user interactions, data routing, and responsive front-end design.
